Canadian Data Report of Fisheries and Aquatic Sciences No. 466

84-4183/

Canadian Data Report of Fisheries and Aquatic Sciences

These reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of Data Reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

Data Reports are not intended for general distribution and the contents must not be referred to in other publications without prior written clearance from the issuing establishment. The correct citation appears above the abstract of each report.

Rapport statistique canadien des sciences halieutiques et aquatiques

Ces rapports servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des Rapports statistiques reflètent la vaste gamme des intérêts et politiques du Ministère des Pêches et des Océans, notamment gestion des pêches, techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, Ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

Les Rapports statistiques ne sont pas préparés pour une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au haut du résumé de chaque rapport.

ABSTRACT

Moores. R. B., A. W. Veitch, and E. G. M. Ash. Atlantic salmon commercial catch statistics, Newfoundland and Labrador, 1980 and 1981. Can. Data Rep. Fish. Aquat. Sci. 466: iv + 213 p.

Data are presented from the 1980 and 1981 commercial Atlantic salmon fisheries. In 1980, there were 2,103 metric tonnes harvested, 62% of which were large salmon. Insular Newfoundland contributed 1,250 metric tonnes or 59% of the total catch. There was a total of 5,609 fishermen with 21,919 units of gear licenced for the entire province. In 1981 there was a general decrease with a total harvest of 1,900 metric tonnes being landed; large salmon comprised 64% of the catch. Insular Newfoundland contributed 1,095 metric tonnes or 57% of the total provincial catch. Effort was reduced to 21,032 gear units licenced to 5,402 fishermen. The mean weights of small and large salmon were similar in both years.

RÉSUMÉ

Moores. R. B., A. W. Veitch, and E. G. M. Ash. Atlantic salmon commercial catch statistics, Newfoundland and Labrador, 1980 and 1981. Can. Data Rep. Fish. Aquat. Sci. 466: iv + 213 p.

Le présent rapport porte sur les données recueillies au cours de la pêche commerciale du saumon de l'Atlantique en 1980 et 1981. Des 2 103 tonnes métriques capturées en 1980, 62% étaient constituées de gros saumons et 1 250 tonnes, ou 59%, provenaient de l'île de Terre-Neuve. Au total, 5 609 pêcheurs exploitant 21 919 engins étaient enregistrés dans toute la province. L'année 1981 a vu un déclin général: les prises ont totalisé 1 900 tm, les gros saumons ont constitué 64% de la prise, l'île de Terre-Neuve a contribué pour 1 095 tm ou 57% de la prise totale provinciale et l'effort est passé à 21 032 engins exploités par 5 402 pêcheurs. Le poids moyen des petits et des gros saumons a été semblable les deux années.

INTRODUCTION

This publication continues a series of reports that give vital statistics from the Newfoundland and Labrador Atlantic salmon (Salmo salar L.) commercial fishery, 1952 to 1981. Data for previous years are available in May and Lear (1971), Lear (1973), Waldron (1974), Reddin and Waldron (1976), Reddin and Day (1980), Moores and Dawe (1980), and Reddin and Short (1981), Short and Reddin (1981), Short and Reddin (1981a). Compilation of these data form an integral part in updating the data base required to assess and examine the status of insular Newfoundland and Labrador Atlantic salmon populations.

METHODS

DATA COLLECTION

Data were obtained from three sources; sales slips, local sales estimates and commercial licence data. Sales slips or purchase slips were supplied to fish buyers by Fisheries Statistics and Systems Branch, Department of Fisheries and Oceans and designed to include such information as daily catch (lbs.) by species and size, price per unit weight, fisherman's name, buyers name, community where fish were landed and type of fishing gear used. In addition, buyers were asked when purchasing salmon to record the number and size of the salmon and state of processing in which they were purchased.

Local sales represent those salmon landings not recorded on purchase slips. These include salmon eaten by the fishermen, given away, or sold directly to consumers. For each community this quantity was estimated monthly by the local fisheries officers and submitted to Fisheries Statistics and Systems Branch on supplementary purchase slip B. Local sales were based on an average obtained from selected fishermen of each community. The accuracy and precision of this estimate are unknown and it may not include all salmon caught in non-salmon gear.

Licence data were obtained from the Resource Management Branch, Licencing Section. These include number of fishermen as well as length (fathoms) and numbers of nets they were licenced to fish.

DATA PROCESSING

Data from Purchase Slips are computer filed by day by community, then summarized by standardized weeks (Appendix 1) by community, Statistical Section, Statistical Area, Fisheries Management Area, NAFO Unit Area, NAFO Division, insular Newfoundland, Labrador and Province. Salmon catches were reported in different landed states of processing such as round, gutted head-on, or dressed gutted head-off fish. For consistency, all values were converted to round weights using conversion factors established in 1953 (Reddin and Short 1981). The conversion factors are: (1) gutted, head on (x 1.2) to round weight; (2) dressed gutted, head off (x 1.25) to round weight. All catches recorded in pounds were converted to kilograms. Local sales which are reported by month by community are prorated over the daily landings recorded for that community for that month from Purchase Slips. Where local sales were reported for a particular month within which there were no daily catch data,

the local sales were divided by the number of days in the month. For the month of May, local sales were divided by 18, the number of days which the fishing season was open. Weights and percentage of local sales by month appear at the bottom of each table in Appendices 2-13. They have been included in the catch statistics also shown in the same tables.

In the tables of Appendices 2-13, the adjusted catch and estimated numbers were initially calculated at the community level and summed to the appropriate Statistical Section, Area, and province.

There are two size categories: small salmon (1SW - one sea-winter) are those less than 2.7 kg, large salmon (MSW - multi-sea-winter) are equal or are greater than 2.7 kg. Unfortunately, buyers often did not record size, usually when size did not affect market value. In these cases landings were recorded as unsized. Also, the proportions of large and small in local sales were not known and these were generally recorded as unsized. The unsized salmon were proportioned into large and small salmon by one of two methods. If the total weight of salmon reported as large and small in a week was equal to or greater than 10% of the unsized landings in that week, the unsized salmon were divided into large and small categories according to the proportions of large and small in the sized catch. Alternatively, if the total weight of sized salmon represented less than 10% of the unsized catch, predetermined default proportions of large and small salmon (based on the previous five year mean proportions) were applied to the unsized salmon to divide them into large and small salmon categories.

Mean weights by week any fishing season by size category were derived from sales slip data that included both weight and corresponding numbers of salmon. Calculations involved dividing the total weight by the numbers of salmon reported for each size category. Initially, mean weights were calculated on a weekly basis at the community level, then the weights and numbers of salmon were totalled and redivided at the various other levels. Mean weights for the entire fishing season were calculated from total weight and numbers of fish, not by averaging weekly mean weights.

The estimated numbers of salmon in each size category were derived from current catch data utilizing either the calculated weekly mean weights or predetermined default weekly mean weights. The calculated weekly mean weights were divided into total adjusted catch for each category if in any given week the number of salmon in a size category (sample size) from which the mean weight obtained was equal to or greater than 50 fish. Default mean weights were used to derive estimated numbers of salmon when the sample size was less than 50 fish in any given week. Default mean weights were the seasonal mean weights which were calculated for the Statistical Area in which the community is located, if the sample size over the entire season for that particular Area was equal to or exceeded 50 fish. Otherwise, the mean weights by size category from insular Newfoundland catch data were used. All estimated numbers of salmon were obtained from the community catch statistics by week and then added to produce both weekly and seasonal numbers of fish for Statistical Sections, Statistical Areas, etc.

Effort data were reported in total fathoms for each fisherman, then added to produce total effort by community, Statistical Section, Statistical Area,

insular Newfoundland, Labrador and province. The total number of licenced gear units was derived by dividing total fathomage by 50 (1 gear unit = 50 fathoms).

STATISTICAL CODES

A description and rationale for the geographical regions by which data are broken down was published by Waldron (1974a). Briefly, Statistical Areas (A-O) and Statistical Sections (1-53) begin at the northern tip of the Great Northern Peninsula and proceed clockwise around the coast and northward to the tip of Labrador (Fig. 1 and 2). Fishing and industry areas (1-5) commence on the Avalon Peninsula and move northwest into Labrador. These are designed primarily as administration areas but also reflect inshore and offshore fishing activity (Fig. 3). NAFO Divisions (1F-5Z) and unit areas (201-501) are also included to allow comparision with historical data (Fig. 4).

RESULTS AND DISCUSSION

The catch statistics for 1980 and 1981 are in Appendices 2-13.

1980

The total catch in 1980 was 2,102,667 kg, the largest recorded catch since records have been kept (Table 1, Fig. 5). However, comparisons of catch (kg) to licenced gear (gear units) ratios since 1969 indicates that 1980 ranks fourth overall (Table 2). The 1980 ratio was 95.9:1 whereas the highest record was 122.9:1 in 1973. An estimated number of 650,621 fish were landed in 1980; 4.5% below the highest previous recorded landings of 681,120 in 1975 (Table 3 and Fig. 6).

The 1980 catch was 113% greater than the catch in 1979 season and was 26.1% higher than the 1970-79 mean of 1,667,715 kg. The ratio of large salmon to grilse was 62%, up 11% from 1979 (Table 3). Labrador accounted for 48.3% (by weight) of the large salmon caught in the province. Of the estimated 650,621 fish landed, 384,418 were small and 266,203 were large (Table 3, Fig. 6). Both the mean weights of large (2.1 kg) and small (4.9 kg) salmon were similar to previous years (Table 4). Licensed fishing effort was reduced further in 1980, following a trend that started in 1975 resulting from a freeze on new licences and the elimination of moonlighters (Moores and Dawe 1980) (Table 1 and 5).

For insular Newfoundland, the 1980 commercial catch was 1,250,067 kg; 16.3% higher than the 1970-79 mean of 1,075,284 kg. The increase over the 1979 catch was 89.1% (Table 1, Fig. 7). Catches were higher than the previous year in all Statistical Areas with the exceptions of Areas G and M, where catches decreased 45.9% and 20.0% respectively. In Area L the 1980 catch was the highest recorded since statistics became available by area (1969) (Table 6). For insular Newfoundland the large salmon comprised 54% of the total Newfoundland catch (Table 7, Fig. 6). The mean weight of large (4.8 kg) and small (2.1 kg) salmon is similar to previous years (Table 4). Effort in areas A-N was 4870 fishermen licenced to fish 18,417 gear units (Table 5).

The Labrador fishery was very successful in 1980. For the first time since 1971 the Labrador catch comprised 40% or more of the total catch for the province. There was a 162.1% increase in catch from 1979 (Table 1). Accepting 1978 and 1979 as anomolous years due to poor sea survival (Reddin and Carscadden 1982), the 1980 catch follows a general trend of increasing catches in Labrador's commercial salmon harvest which began in the early 1970s (Table 1, Fig. 8). Large salmon comprised 73% of the total catch by weight. The mean weight of large salmon increased from 4.4 kg in 1979 to 5.0 kg in 1980. The mean weight of small salmon was 2.2 kg; up from 2.0 kg in 1979 (Table 4).

1981

The 1981 provincial Atlantic salmon harvest decreased 9% from 1980 with a catch of 1,909,468 kg (Table 1). It was, however, 11.1% above the 1971-80 mean of 1,718,505 kg. The catch to licenced gear ratio decreased to 90.8:1 as compared to 95.9:1 for the previous year (Table 2). The total estimated number of fish caught in the province during 1981 was 599,237. This was down from the 1980 estimate of 650,621 fish (Table 3). Sixty-five percent (by weight) of salmon caught in 1981 were large, which corresponded closely to the 1971-80 mean of 66% (Table 3). Labrador accounted for 47% (by weight) of all large salmon landed in the province (Table 8). Of the estimated 599,237 fish landed 349,570 were small and 249,667 were large (Table 3). Both mean weights of large and small salmon were comparable to 1980. Mean weight of small was 2.0 kg while the mean weight of large was 5.0 kg (Table 4). A trend toward decreasing licensed fishing effort continued in 1981 with the lowest number of fishermen licenced since 1973 (Table 5). Gear units fished also decreased to 21,032 units, the lowest since 1974 (Table 1).

In insular Newfoundland, commercial fishermen caught a total of 1,094,897 kg of salmon; 57% of the provincial total. This was the lowest percentage since 1961 (Table 1). In 1981 there was a 12.4% decrease in catch from 1980. However, the 1981 catch corresponded to the 1971-80 mean of 1,080,634 kg. Compared to 1980, catches in all Statistical Areas were down with the exceptions of areas A, C, D, and G, where increases of 5.3%, 7.2%, 14.8%, and 22.6%, respectively were observed (Table 6). Large salmon comprised 60% by weight or 37% by numbers of the total (Table 8). The mean weights of large and small salmon were comparable to 1980 (Table 4). Effort came from 4671 fishermen licenced for 17,582 gear units (Table 5).

The Labrador commercial fishery was very successful again in 1981 producing 814,571 kg, a decrease of only 4.5% from the previous record year (Table 1). As in 1980, the Labrador catch comprised over 40% of the provincial total, using only one sixth the amount of licenced gear (Table 5). The 1981 catch was 29% higher than the mean of 631,871 kg for 1971-80, continuing the trend mentioned previously. The Labrador component of total provincial catch was 6% higher than the 1971-80 mean of 37% (Table 1). Seventy-one percent (71%) by weight and 50% by number of the salmon landed were large (Table 8). Mean weight of these fish was 5.1 kg. There was a slight decrease in licenced gear and numbers of fishermen participating in the fishery (Table 5).

ACKNOWLEDGMENTS

For collecting the data, the authors acknowledge the staff of Fisheries Statistics and Systems Branch and Resource Management Branch. Computer programs were developed by Eric Harvey and L. Feltham of Fisheries Statistics and Systems Branch. Neila Caines assisted with data tabulation and computation. Figures were prepared by Neil Hefford and typing by K. Harding and P. Doyle. Thanks to R. Porter, D. Reddin and B. Dempson for editing.
